

MOHAMED KAIF A

Full Stack MERN Developer

mohamedkaif2603@gmail.com | +91 8778117440 | [LINKEDIN](#) | [GITHUB](#)

SKILLS

Frontend	HTML5, CSS, JavaScript, React, Tailwind CSS
Backend	Node.js, Express.js
Database	MongoDB, MS SQL
Technical Skills	Python
Development Tools	Git, GitHub, VS Code
Others	Rest API, Responsive web design, Deployment

PROJECTS

Hotel Veggie – Restaurant Billing and Management System

[GitHub Link](#)

Developed a web application for managing restaurant orders, billing, and sales tracking. Customers can add menu items to the cart, make QR-based payments, and get printable bills. Admins can manage menu items and view monthly sales reports with CSV export, all powered by browser LocalStorage for seamless data handling.

- Developed a responsive restaurant management web application for menu display, order billing, and sales tracking using pure JavaScript
- Implemented Add-to-Cart, quantity updates, and QR-based UPI payment simulation with persistent data storage via localStorage.
- Built a CRUD-based admin panel for adding, editing, and deleting menu items dynamically.
- Integrated a monthly sales report module with CSV export functionality for easy business record tracking.

Technologies Used: HTML | CSS | JavaScript | LocalStorage

Blood Bridge – Blood Donation Management System

Developed a complete blood donation management web application using the MERN stack to efficiently connect donors and recipients, enabling users to register, request blood, and view real-time stock availability with automatic updates on donations and issued units

- Developed a full-stack blood donation management system using the MERN stack to connect donors and recipients with real-time blood stock updates and seamless request handling.
- Integrated MongoDB as the database to store user profiles, requests, and blood inventory for reliable and scalable data management.
- Implemented JWT authentication and password hashing for secure login and role-based access control.
- Built RESTful backend APIs with Node.js and Express.js to manage donors, recipients, and blood stock data.

Technologies Used: HTML | CSS | React | MongoDB | Express.js | Node.js | MERN STACK

EXPERIENCE

Full Stack Developer Intern - Offline

Jun 2025 | Oct 2025

- Completed offline training that included hands-on development in React, HTML, CSS, Tailwind CSS, and JavaScript ES6+.
- Implemented interactive UI components and optimized page performance for a smooth user experience.
- Used Visual Studio Code and Git for efficient coding, version control, and collaboration.

MINI PROJECTS

Sign Up & Login Page

[GitHub Link](#)

Designed a secure and responsive authentication interface using React..

Implemented form validation and error-handling to ensure smooth and clean user authentication flow.

Calculator & Currency Converter

[GitHub Link](#)

Created a calculator and real-time currency converter using JavaScript and React.

Improved accuracy and user experience by validating inputs and optimizing calculation logic.

Travel Log

[GitHub Link](#)

Built a simple travel activity log to add, view, and manage travel entries.

Integrated structured data handling for storing and updating travel records effectively.

Uber UI Clone

[GitHub Link](#)

Built an Uber-style UI using HTML, and CSS, replicating the design elements of the original app.

Improved visual accuracy by matching spacing, and color patterns to the real Uber interface.
